

Switching Software Client for Windows included! Audio & Microphone Switching Function

2-port Desktop USB KVM Switch w/ Audio & Mic

Push button, keyboard hotkeys and Switching Software client for switching operation

USB-202A Desktop USB KVM Switch w/ Audio&Mic

The USB-202A is a 2-port Desktop USB KVM Switch with Audio & Mic Switch. It offers pure USB interface support on both PC side and the console side. It allows you to use USB keyboard, mouse and a set of speakers and microphone to control two USB-enabled PCs using the Switching Software Client installed on your PC. It allows you to access, control, boot and reboot two USB-enabled *multimedia* computers with only one USB keyboard, mouse, monitor, together with the Switching Software Client installed on your PCs.

Win-based Switching Software Support on PC

The USB-202A also provides a Win-based Switching Software that shows you the current active PC and allows you to select PC as well as configure keyboard hotkeys. It also allows you to configure independent/simultaneous switching of your PC and audio/mic channels. It appears as an icon on the system tray of your Window desktop, and will change its number icon upon switching to show the active PC port. Using this small client software, it will give KVM users utmost convenience and control.

Audio and Microphone Switching offers uninterrupted multimedia experience

The audio and microphone switching function allows you to leverage the multimedia systems on each of your multiple computers. You can monitor the audio/mic input/output of each of your computers without plugging on and off the audio/mic cables. And it takes only one set of speaker and microphone instead of one set for each computer.

USB interface compatibility for multi-platform support

The USB interface technology offers multi-platform support for PC, Macintosh G3/G4 and iMAC. [The KVM Switching Software client supports only Windows platforms].

Features

- 2-port Desktop USB KVM switch with Audio & Mic Switching
- USB keyboard and mouse support
- Pure USB interface support on both PC and console side
- USB 1.1 Specification compliant
- Independent/simultaneous audio-mic and PC switching
